Project Title	LegalEase: AI-Powered Legal Document Generator	
Maximum Marks	5 Marks	

Project Proposal (Proposed Solution) report

LegalEase is an AI-powered legal document generator designed to help users create structured legal documents from guided inputs. It uses AI-assisted drafting to reduce the effort involved in preparing documents and provides an editable preview before export.

Project Overview	
Objective	Provide a simple workflow for generating a draft legal document from user-provided details and AI-assisted content generation.
Scope	Cover document creation from input collection through AI generation, editable review, formatting, and download in supported file formats.
Problem Statement	
Description	Preparing legal documents manually can require significant time and careful formatting. Users may need a structured starting draft instead of creating every section from scratch.
Impact	LegalEase streamlines document preparation by generating a structured draft and allowing the user to review and edit it before downloading the final file.
Proposed Solution	
Approach	Collect document type, parties, terms, and effective date; send the structured request through the backend to the AI generation service; then prepare the result for editing and export.
Key Features	- AI-assisted legal document generation. - Editable preview and terms review before export.

- Export generated documents as TXT, DOCX, or PDF.
- Support formatted output with document details and branding where configured.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Application runtime for the LegalEase web application	Python application environment
Memory	Memory for application processing and normal development/demo use	Suitable RAM for development and demo deployment
Storage	Storage for generated documents, application files, and logs	Local/cloud storage as required by deployment
Software		
Frameworks	Streamlit frontend and FastAPI backend	Streamlit + FastAPI
Libraries	Google Gemini API and Python libraries for DOCX/PDF/TXT generation	Gemini API + document/export libraries
Development Environment	Python development environment / IDE	Python IDE / development environment
Data		
Data	User-provided legal-document details and generated document content	Structured input fields + generated legal content
