

Solution Requirements

Date	SWTID-2026-9030
Team ID	LegalEase: AI-Powered Legal Document Generator
Project Name	XXXXXX
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	User authentication can verify the user before allowing document creation and access to generated documents.	High
		Define user access for document creation, editing, preview, and download; administrative access is limited to configuration where applicable.	Medium
2	Authorization levels	Connect to the Google Gemini API for AI-assisted generation and use document-generation/export libraries for TXT, DOCX, and PDF output.	High
3	External interfaces		

		Connect to the Google Gemini API for AI-assisted generation and use document-generation/export libraries for TXT, DOCX, and PDF output.	High
4	Transactions processing	Process document-generation requests through the backend; validate inputs, send the request to the AI service, receive the generated content, and prepare it for editing/export.	High
5	Reporting	Provide a generated-document preview and allow the user to download the result in supported formats such as TXT, DOCX, and PDF.	High
6	Business rules, etc.	Required inputs must be collected before generation; the generated draft should be reviewable/editable by the user before download.	High
7	Compliance to laws or regulations	Handle user-provided legal information carefully and avoid claiming that the generated draft is a substitute for professional legal advice.	High
8	Other	Allow users to edit the generated document and regenerate or export after making changes.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	Generated-document request should complete within a practical demo response time; interface actions should respond promptly.	Typical generation response within 10?20 seconds under normal network/API conditions.
2	Scalability	Use a stateless API workflow so additional users/requests can be handled without changing the document-generation logic.	Supports concurrent requests subject to available hosting and AI API limits.
3	Security & Data Privacy	Protect user-provided document details and API credentials; do not expose secret keys in the client interface.	Secrets stored server-side; HTTPS should be used in deployment; sensitive inputs should not be logged unnecessarily.
4	Reliability & Availability	Handle API/network failures without crashing the interface and provide a clear retry/error message.	Graceful error handling and user-visible failure messages for failed generation/export.
5	Usability & Accessibility	Provide a simple form, readable preview, editable content, and clear download actions.	Usable through the Streamlit interface with clear labels and keyboard-accessible controls where supported.
6	Other	Keep the application modular so frontend, API, AI prompt logic, and export functions can be maintained independently.	Python-based modules with documented interfaces; TXT/DOCX/PDF outputs remain portable.
